

## **Week 5 Report**

This week we began research into the background of our patient and existing solutions. Our goal is to gather as much information as possible on the disease our client has. Children with Cerebral Palsy benefit from devices that aid in crawling. We plan to find existing solutions benefitting patients with CP and similar muscular disorders to provide a jumping off point for our project. We also sent the privacy agreement to the family in order to formalize the relationship.

Questions:

- What does "environment" entail for the background of the problem section of our Preliminary Report?
- Should we refer to the family we are working with as our "client" rather than Courtney Dunn?
