

Week 6 Report

Our main focus for this week was completing the preliminary report. In order to find existing solutions we searched through the US patent database and online for relevant inventions. We then updated our project scope based on feedback of the initial submission. We edited our need statement to make it more specific, and compiled background information on our client and her disease. Additionally, we began working on the preliminary report presentation which Katherine will give on Monday 10/7.

Prof. Klaesner could you let us know which days of the week you will be in your Danforth campus office so that we know the best time to schedule meetings?
